## Annual Drinking Water Quality Report

Town of Double Springs Water & Sewer Board

We're very pleased to provide you with this year's Annual Quality Water Report. We want to keep you informed about the excellent water and services we have delivered to you over the past year. Our goal is and always has been, to provide to you a safe and dependable supply of drinking water. The Town of Double Springs Water & Sewer Board purchases water from two different sources. Our major supplier is Arley Water Works, Arley AL. They have a surface water treatment plant obtaining their water from Smith Lake. Our other supplier is the City of Haleyville Water Works and Sewer Board, Haleyville AL. They buy their water from the Upper Bear Creek Water, Sewer, and Fire Protection District, which have a surface water treatment plant obtaining water from Upper Bear Creek reservoir.

I'm pleased to report that our drinking water is safe and meets federal and state requirements. If you have any questions about this report or concerns with your water utilities, please contact Ronald Padgett at (205) 489-5447. We want our valued customers to be informed about their water utilities. If you want to learn more, please attend any of our regular scheduled meetings, which are held the fourth Tuesday of each month in the Double Springs City Hall, 21 Main Street at 5:30 p.m. Water Board Members: Ed Townsend - Chairman, Brittney Tucker - Council Liaison, Steve Cagle, Kim Miller, and Bart Seymour.

Town of Double Springs Water Sewer Board routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2021. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

*Non-Detects (ND)* – laboratory analysis indicates that the constituent is not present.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

*Picocuries per liter (pCi/L)* - picocuries per liter is a measure of the radioactivity in water.

*Treatment Technique (TT)* - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible

using the best available treatment technology.

Maximum Contaminant Level Goal - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Action Level – the concentration of a contaminant that triggers treatment or other requirements, which a water system must follow.

The following report is the test results conducted for the Town of Double Springs Water & Sewer Board

| Disinfection By-Products Results |                  |                         |                              |     |    |   |  |  |  |  |

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Town of Double Springs Water & Sewer Board is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and

steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <a href="http://www.epa.gov/safewater/lead">http://www.epa.gov/safewater/lead</a>.

We have learned through our monitoring and testing that some constituents have been detected. The EPA has determined that your water IS SAFE at these levels.

The following is from Arley Water Works, Arley AL, who is the major water supplier for the Town of Double Springs Water & Sewer Board.

| Sulfate                              | NO               | 8.1                      | ppm          | n/a     | 500    | Naturally occurring; erosion of natural deposits                  |  |  |  |  |
| Total Dissolved Solids               | NO               | 59.0                     | ppm          | n/a     | 500    | Naturally occurring; runoff                                       |  |  |  |  |
| Zinc                                 | NO               | 0.35                     | ppm          | n/a     | 5      | Erosion; factory/refinery discharge; landfill runoff              |  |  |  |  |

<sup>\*</sup> Figure shown is 90th percentile and # of sites above Action Level (AL) = 0

## **PFAS Contaminants**

Per- and polyfluoroalkyl substances (PFAS) are a group of man-made chemicals that were used in manufacturing and in other industrial and consumer applications. The EPA has not established primary drinking water regulations for PFAS substances. The lifetime health advisory level for PFOA and PFOS is a combined 70 parts per trillion (ppt), or 0.07 parts per billion (ppb). Below is a list of PFAS contaminants for which our system monitored in 2020 as required and the results of that monitoring. For more information on PFAS contaminants, please consult <a href="https://www.epa.gov/pfas/pfas-fact-sheets-and-infographics">https://www.epa.gov/pfas/pfas-fact-sheets-and-infographics</a>

| Contaminant  | Unit<br>Msmt | Level<br>Detected | Contaminant                  | Unit<br>Msmt | Level<br>Detected |
|--|--------------|-------------------|------------------------------|--------------|-------------------|
| 11CI-PF3OUdS (11-chloroeicosafluoro-3-oxaundecane-1-sulfonic acid) | ppb          | ND                | Perfluoroheptanoic acid      | ppb          | ND                |
| 9CI-PF3ONS (9-chlorohexadecafluoro-3-oxanone-1-sulfonic acid)      | ppb          | ND                | Perfluorohexanesulfonic acid | ppb          | ND                |
| ADONA (4,8-dioxa-3H-perfluorononanoic acid)                        | ppb          | ND                | Perfluorononanoic acid       | ppb          | ND                |
| HFPO-DA (Hexafluoropropylene oxide dimer acidA)                    | ppb          | ND                | Perfluorooctanesulfonic acid | ppb          | ND-0.005          |
| NEtFOSAA (N-ethylperfluorooctanesulfonamidoacetic acid)            | ppb          | ND                | Perfluorooctanoic acid       | ppb          | ND                |
| NMeFOSAA (N-methylperfluorooctanesulfonamidoacetic acid0           | ppb          | ND                | Perfluorotetradecanoic acid  | ppb          | ND                |
| Perfluorobutanesulfonic acid                                       | ppb          | ND                | Perfluorotridecanoic acid    | ppb          | ND                |
| Perfluorodecanoic acid   | ppb          | ND                | Perfluoroundecanoic acid     | ppb          | ND                |
| Perfluorohexanoic acid   | ppb          | ND                | Total PFAS                   | ppb          | ND-0.005          |
| Perfluorododecanoic acid   | ppb          | ND                |                              |              |                   |

<sup>\*\*</sup> Haleyville had a monitoring non compliance violation during the 4th quarter of 2021.

As you can see by the table, our system had no violations. Your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected. The EPA has determined that your water IS SAFE at these levels.

The sources of drinking water both tap and bottled water include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground it dissolves naturally occurring minerals and radioactive material, and it can pick up substances resulting from the presence of animals or from human activity.

Based on a study conducted by ADEM with the approval of the EPA a statewide waiver for the monitoring of asbestos and dioxin was issued. Thus, monitoring for these contaminants was not required.

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

MCL's are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Please call our office if you have questions at (205) 489-5447. Office hours are Monday – Friday, 8:00 a.m. – 4:30 p.m. 1<sup>st</sup> Saturday of each month 8:00a.m. – 12:00p.m.

We at The Town of Double Springs Water & Sewer Board work around the clock to provide top quality water to every tap, said Mayor Robinson. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

This report will not be delivered to personal addresses, but is available to anyone who wishes to acquire a copy at The Town of Double Springs Water Department located at City Hall, 21 Main Street, Double Springs, AL 35553.
